Editor and Publisher

ITMA 2019, wait for entire industry will be over in few weeks' time. We will be exploring lot of innovations by Indian and International machinery companies in largest Textile/ Garment Technology Exhibition in Barcelona / Spain. ITMA sets the trend and provide marketplace and knowledge platform for user industry who will be exploring fresh ideas, right solutions to their problems and encouraging collaborative business partnerships for growth.

Entire industry in the world hoping for something good to happen in this depressing time. Across the world industrialist is making hue-cry for not getting enough business, good margins and survival is tough to across the value chain from Ginner to Retailers.

Indian industry going through transition stage where old technology need to be replaced by new, SME feeling pinch and shut down their industries instead of taking this in right spirit. To be competitive in the global market; Innovation, synergy with value chain partner, knowledge of market updates, Machine lifecycle, maintenance, which technology is good for which product knowledge is must. For Cotton /blended fabrics: Airjet loom, for Synthetic fabrics: Water jet looms, For Furnishing fabric: Rapier looms are best. Different countries around the world offering different technology benefits along with Digital solution, good service and availability of spare parts in the country/ area. Indian SME sector need to come out of fear , add technology cost to the final price to make company viable to run. Indian Power loom owner can take advantage of Group work shed scheme for maximum benefits.

We wish maximum Indian Textile Entrepreneur visit the exhibition and choose the best technology with service and digitally advanced machines.

Wish you all Productive Growth and See you at ITMA , Barcelona..!
